

YESA PROJECT PROFILE: Selian Agricultural Research Institute, Tanzania

Month/Year Started: January 1990

Month/Year Finished: September 1990

Client: Canadian International Development Agency

Locations

TANZANIA

Description

YESA was part of the planning team that designed a \$ 5M Institutional Support Project for the farming systems research centre at Selian Agricultural Research Institute.

Dr. Yap served as the WID and Environmental Specialist in the team. She documented the gender division of labour in the different farming systems in the region and made recommendations as to how the farming systems research at SARI could effectively serve the interests of the small producers, many of whom are women. YESA also identified the different ways in which the research at SARI and the HRD component could promote and support environmentally-sustainable agriculture.
